Technical data

 Fire resistance class EI 15 ($h_{\max}=3.1$ m)	 Max height 3.1 m ¹⁾
 Wall mass 13 kg/m ² ²⁾	 Acoustic insulation $\Delta R_W = \text{up to } 12$ dB ³⁾

The above-mentioned parameters apply to a partition made of sheet metal profiles with a thickness of 0.55 and 0.6 mm.

- 1)** The stated heights apply to constructions with a profile spacing of 600 mm. When a structure with profiles spaced every 300 or 400 mm is used, the permissible wall height increases. Contact system provider representatives for details. The stated heights apply to rooms where only a few persons are present simultaneously (e.g. rooms in flats, hotels, hospitals). In rooms where a large number of persons are present simultaneously (e.g. conference rooms, classrooms, lecture halls), the permissible height is 2.6 m.
- 2)** The weight specified does not include the insulation material weight.
- 3)** Estimated increase in acoustic insulation effectiveness on the basis of the DIN 4109 standard
